INTRODUCTION

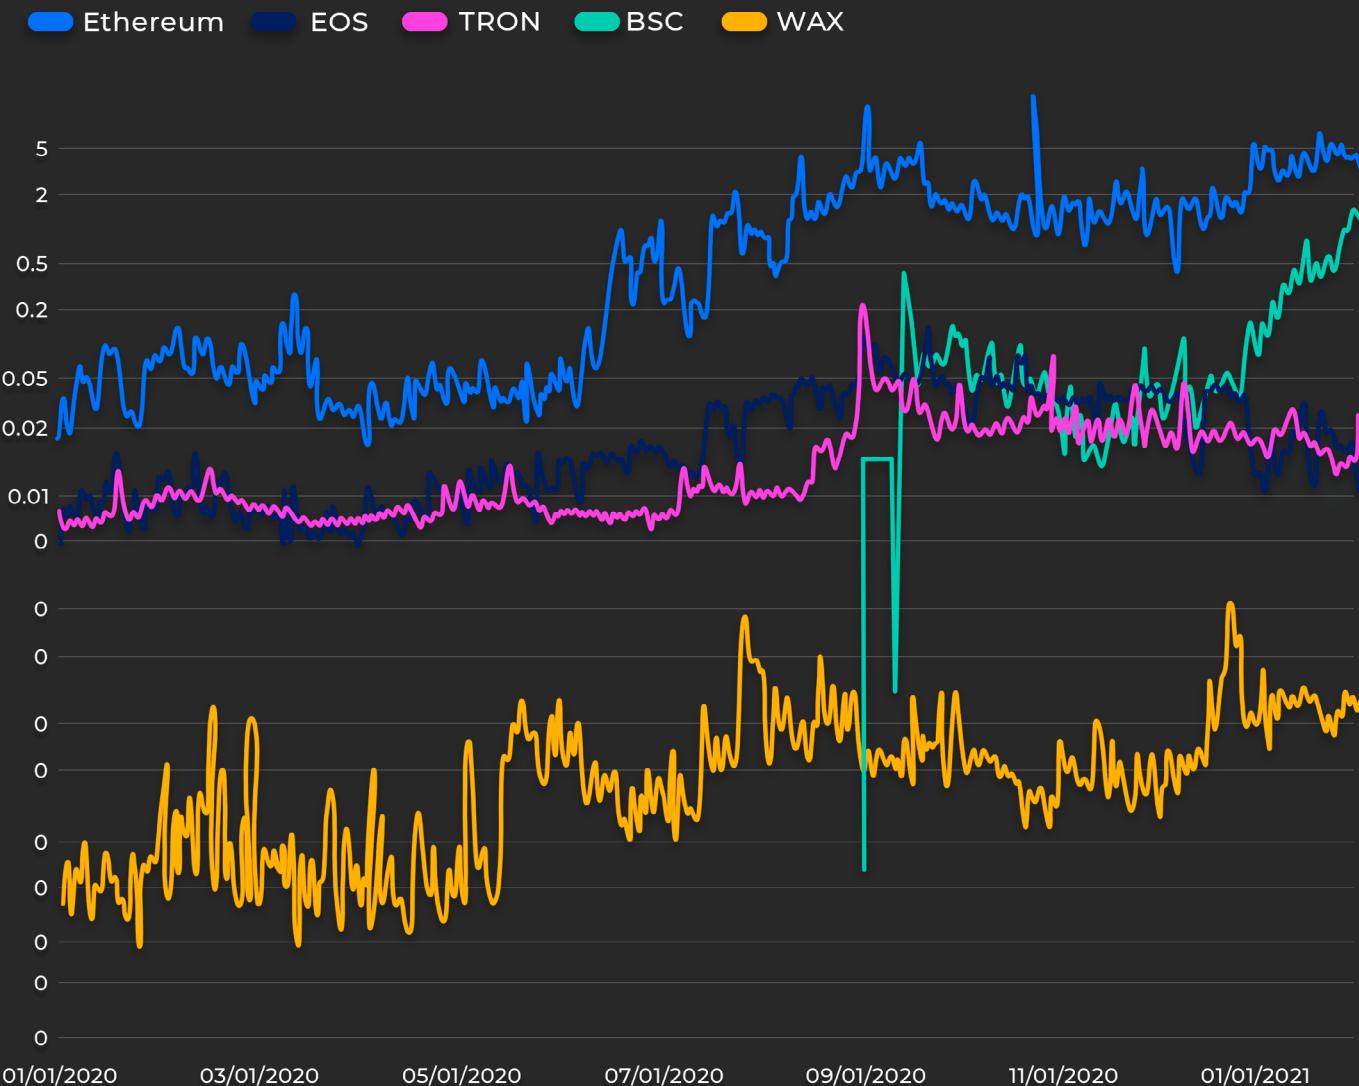

MultiBridge - \$mBRIDGE

MultiBridge will be the first multi chain bridge that will connect projects on Binance Smart Chain, Ethereum and Polkadot. With future support for upcoming chains like Dfinity.

PROBLEM

We have seen that the Ethereum DeFi sector has started to see a rapid growth with Total Value Locked exceeding \$40B assets. With the rise of DeFi on Ethereum there were first major flaws spotted - named ethereum gas. Due to high gas fees there has been a huge barrier for new crypto enthusiasts to enter and trade Ethereum tokens. Innovators have seen a solution in the Binance Smart Chain where first big projects like PancaSwap have started to show a competition to the likes of Uniswap. Binance Smart Chain has paved the way for many new projects and we have seen a big increase in BSC projects in the last quarter of 2021. This has lead to many Ethereum projects searching for alternative token on BSC. At the moment a Binance Bridge is the only solution that has proven to be working. As the nature of the solution is centralized there is a long queue in creation and swap of tokens from Ethereum to Binance Smart Chain. With upcoming Polkadot blockchain and Dfinity blockchain we will only see more demand for decentralized bridge solutions.

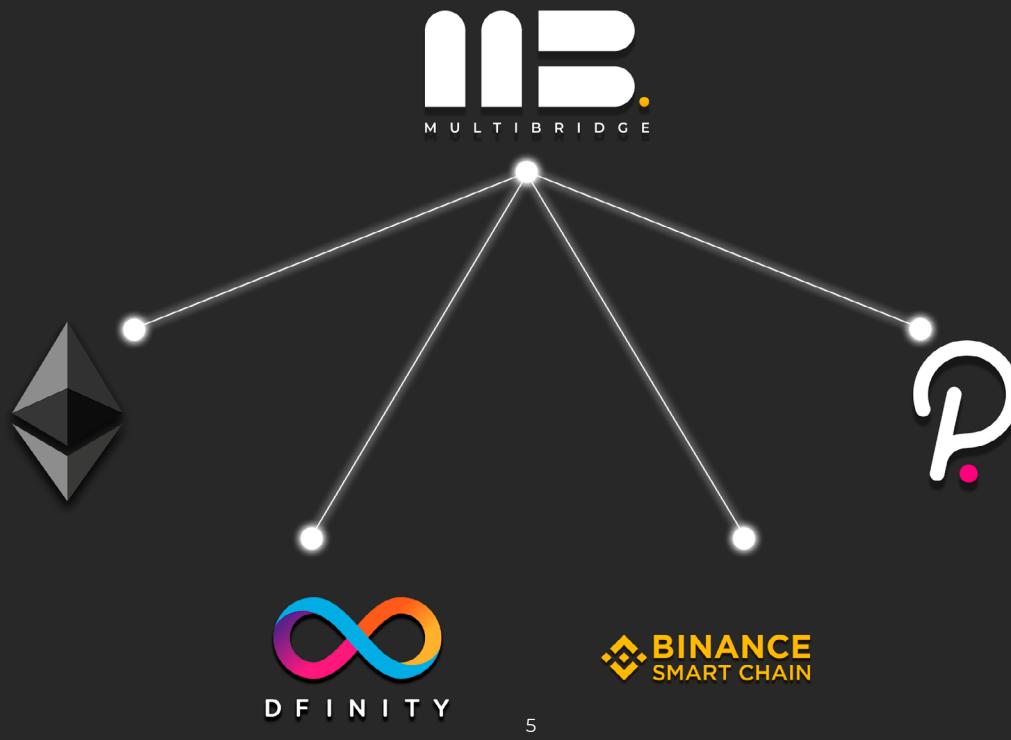

TRANSACTION VOLUME BY PROTOCOL, bN USD

SOLUTION

MultiBridge

MultiBridge will be a decentralized application that will offer projects from Ethereum and Polkadot to migrate to Binance Smart Chain and vice versa. As the nature of the solution will be decentralized everyone will be able to create their token on a desired chain with no queue or wait time. If a project will want to migrate their whole ecosystem to another chain there will be a designated support offered.
